## General procedure for the $\mathrm{Re}_{2} \mathrm{O}_{7}$-catalyzed rearrangements

$\mathrm{Re}_{2} \mathrm{O}_{7}$ ( 0.015 equiv) and MeOH (7.7 equiv) were dissolved in 1,2-DCE under an argon atmosphere, and the resulting mixture was stirred at $45^{\circ} \mathrm{C}$ for 15 min . At $45^{\circ} \mathrm{C}$, a solution of propargylic alcohol (1 equiv) was added and the mixture was stirred at the same temperature overnight. The reaction was
then filtered on celite and concentrated to dryness. The obtained crude product was purified on silica gel.
