General Remarks: All reactions requiring anhydrous conditions were carried out under a nitrogen, atmosphere and the solvents were dried appropriately before use. $R_{\mathrm{f}}$ values refer to TLC on 0.25 mm silica gel plates. Microwave-assisted reactions were carried out in a CEM Discover (TM) single mode microwave reactor with an IR temperature sensor. $\mathrm{CDCl}_{3}$ was used as solvent for NMR measurements. NMR data are reported in $\delta$ (ppm) from TMS at $25^{\circ} \mathrm{C}$ and peak assignments were made on the basis of ${ }^{1} \mathrm{H}-{ }^{1} \mathrm{H}$ COSY and HMQC experiments. IR spectra were recorded in $\mathrm{CDCl}_{3}$ solution unless otherwise specified. Accurate mass spectra were recorded on a LTQ-Orbitrap highresolution mass spectrometer (Thermo, San Jose, CA, USA), equipped with a conventional ESI source. Bicyclopropylidene (BCP) was prepared according to the previously published procedure. ${ }^{1}$

## 6,7-Dimethoxy-3,4-dihydroisoquinoline 2-oxide (6)

$\mathrm{NaHCO}_{3}(5.55 \mathrm{~g}, 66 \mathrm{mmol})$ was added to a stirred suspension of isoquinoline $5(2.55 \mathrm{~g}$, 13.2 mmol ) in a $4: 1$ mixture of $\mathrm{MeCN} /$ THF ( 24 mL ) and aqueous $\mathrm{Na}_{2}$ EDTA ( $0.01 \mathrm{M}, 18.4 \mathrm{~mL}$ ). The mixture was then cooled in an ice bath and Oxone ${ }^{\circledR}(10 \mathrm{~g}, 16.25 \mathrm{mmol})$ added portionwise over 4.5 h . The mixture was stirred at $0^{\circ} \mathrm{C}$ for 45 min , then diluted with EtOAc ( 20 mL ) and $\mathrm{H}_{2} \mathrm{O}(20$ mL ). The two phases were separated and the aqueous solution extracted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}(4 \times 20 \mathrm{~mL})$. The combined organic phases were dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered and concentrated under reduced pressure to afford the crude nitrone. Recrystallization from $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ /petroleum ether and chromatography on silica gel (eluent: $\mathrm{EtOAc} / \mathrm{MeOH}$, first 2:1, then $3: 2$ ) of the compound recovered from the recrystallization mother liquors gave analytically pure $6(1.83 \mathrm{~g}, 66 \%)$ as a yellow solid identical to that reported in the literature. ${ }^{2}$
