## Experimental procedures and characterisation data

Methoxyallene [1], TMSE-allene [2], and benzyloxyallene [2] were prepared following literature procedures.

Preparation of 1,2-oxazines (3S)-3b and (3R)-3b
By a procedure similar to that for methoxyallene (Procedure 1), TMSE-allene ( $411 \mathrm{mg}, 2.63 \mathrm{mmol}$ ) in THF ( 40 mL ) was treated with $n$-BuLi ( 2.5 M in hexanes;
$1.0 \mathrm{~mL}, 2.5 \mathrm{mmol})$ at $-40^{\circ} \mathrm{C}$, followed by slow addition of nitrone $\mathbf{1 a}(263 \mathrm{mg}$, $1.00 \mathrm{mmol})$ in dry $\mathrm{THF}(6 \mathrm{~mL})$ at $-130^{\circ} \mathrm{C}$. The mixture was allowed to reach $-80^{\circ} \mathrm{C}$ within 2.5 h . After standard workup, crude products were isolated, by filtration through silica gel pad (hexane/ethyl acetate 6:1), as a yellow oil. Diastereomers were separated by an additional column (silica gel, hexane/ethyl acetate 9:1) to give (3S)3b ( $133 \mathrm{mg}, 32 \%,>95 \%$ purity) and ( $3 R$ )-3b ( $78 \mathrm{mg}, 19 \%$ ) as colourless oils.

## (3S,3a' S,4' S,6a'S)-2-(2',2'-Dimethyltetrahydrofuro[3,4-d][1,3]dioxol-4'-yl)-4-(2-trimethylsilylethoxy)-3-phenyl-3,6-dihydro-2H-[1,2]oxazine ((3S)-3b):

## Preparation of 1,2-oxazines (3S)-3c and (3R)-3c

By the procedure similar to that for methoxyallene (Procedure 1), benzyloxyallene $(719 \mathrm{mg}, 4.92 \mathrm{mmol})$ in THF ( 45 mL ) was treated with $n$-BuLi ( 2.5 M in hexanes; $1.8 \mathrm{~mL}, 4.5 \mathrm{mmol}$ ) at $-40^{\circ} \mathrm{C}$, followed by slow addition of nitrone $\mathbf{1 a}(540 \mathrm{mg}$, $2.05 \mathrm{mmol})$ in dry $\operatorname{THF}(10 \mathrm{~mL})$ at $-130^{\circ} \mathrm{C}$. The mixture was allowed to reach $-80^{\circ} \mathrm{C}$
within 1.5 h . After standard workup, crude products were separated on a column (silica gel, hexane/ethyl acetate 6:1) to give enriched fractions of (3S)-3c (235 mg) and $(3 R)-3 \mathrm{c}(394 \mathrm{mg})$ as pale yellow oils. Each fraction was additionally chromatographed (silica gel, hexane/acetone 6:1, and 5:1, resp.) to give pure (3S)-3c ( $182 \mathrm{mg}, 21 \%$ ) and ( $3 R$ )-3c (371 mg, 44\%) as colourless oils.
(3S,3a'S,4'S,6a'S)-4-Benzyloxy-2-(2',2'-dimethyltetrahydrofuro[3,4-d][1,3]dioxol-4'-yl)-3-phenyl-3,6-dihydro-2H-[1,2]oxazine ((3S)-3c):

## Isolation of by-products 4 and 5

Compounds 4 ( $8 \mathrm{mg}, 1 \%$ ) and 5 ( $38 \mathrm{mg}, 3 \%$ ) were isolated as colourless oils from the reaction of lithiated methoxyallene ( 2.4 equiv.) generated from methoxyallene ( $640 \mathrm{mg}, 0.77 \mathrm{~mL}, 9.13 \mathrm{mmol}$ ) and $n-\mathrm{BuLi}(2.5 \mathrm{M}$ in hexanes; $3.5 \mathrm{~mL}, 8.75 \mathrm{mmol}$ ) with nitrone 1a ( $960 \mathrm{mg}, 3.65 \mathrm{mmol}$ ) at $-78{ }^{\circ} \mathrm{C}$, after standard workup (see Procedure 1) and additional purification on column. Diene 4 undergoes fast
decomposition either during purification on silica or storage. Major products (3S)-3a $(303 \mathrm{mg})$ and $(3 R)-3 \mathrm{a}(92 \mathrm{mg})$ were isolated in $25 \%$ and $8 \%$ yield, respectively.
(Z)-2-Methoxy-1-phenylbuta-1,3-diene (4) [3,4]:

## Hydroxylation of (3S)-3b

Following the general Procedure 2, compound (3S)-3b (289 mg, 0.69 mmol ) in THF ( 40 mL ) was treated with a solution of $\mathrm{BF}_{3} \cdot \mathrm{THF}(1 \mathrm{M}$ in THF, $3.6 \mathrm{~mL}, 3.6 \mathrm{mmol}$ ). After oxidative workup, the crude mixture was chromatographed (silica gel, hexane/ethyl acetate 2:1) to yield compounds 8 (106 mg, 35\%, first eluted) as colourless crystals and 9 (175 mg, 58\%) as a colourless oil.
(3S,4S,5S,3'aS,4'S,6'aS)-2-(2',2'-Dimethyltetrahydrofuro[3,4-d][1,3]dioxol-4'-yl)-4-(2-trimethylsilylethoxy)-3-phenyl-[1,2]oxazinan-5-ol (8):

## Hydroxylation of (3R)-3a

By the procedure similar to that for (3S)-3a (Procedure 2), compound (3R)-3a ( $810 \mathrm{mg}, 2.43 \mathrm{mmol}$ ) in THF ( 60 mL ) was treated with a solution of $\mathrm{BF}_{3} \cdot \mathrm{THF}(1 \mathrm{M}$ in THF, $9.8 \mathrm{~mL}, 9.8 \mathrm{mmol})$. After standard oxidative workup, the crude mixture was chromatographed (silica gel, hexane/ethyl acetate 1:1) to yield an enriched fraction of 10 (186 mg, first eluted) and pure 11 (568 mg, 66\%). Additional chromatography purification of 10 (silica gel, dichloromethane/acetone 9:1) yielded an analytically pure sample ( $109 \mathrm{mg}, 13 \%$ ). Both alcohols were isolated as colourless oils.

## Reaction of 21 with $\mathrm{Sml}_{2}$ and attempted cyclisation with MsCl

Following the general Procedure 4, compound 21 (168 mg, 0.60 mmol ) in THF ( 5 mL ) was added to a solution of $\mathrm{Sml}_{2}$ (ca. 0.1 M in THF, $18 \mathrm{~mL}, \sim 1.8 \mathrm{mmol}$ ). After workup and drying over $\mathrm{MgSO}_{4}$, the crude product was filtered and the solvents were removed to give a colourless oil ( 160 mg ). This was dissolved in $\mathrm{CH}_{2} \mathrm{Cl}_{2}(30 \mathrm{~mL})$, triethylamine ( $1 \mathrm{~mL}, 7.0 \mathrm{mmol}$ ) and methanesulfonyl chloride ( $150 \mu \mathrm{~L}, 1.94 \mathrm{mmol}$ ) was slowly added at $0^{\circ} \mathrm{C}$. The reaction mixture was allowed to reach room temperature and stirred overnight, then quenched with $\mathrm{H}_{2} \mathrm{O}$ and extracted with several portions of $\mathrm{CH}_{2} \mathrm{Cl}_{2}$, and the combined organics were dried $\left(\mathrm{MgSO}_{4}\right)$. Crude products were separated on a column (silica gel, hexane/ethyl acetate) to give compounds 23 (16 mg, 7\%), 24 ( $63 \mathrm{mg}, 25 \%$ ), 25 ( $10 \mathrm{mg}, 5 \%$ ) as colourless oils and compound 26 ( $68 \mathrm{mg}, 35 \%$ ) as a colourless solid.

## (2S,3R,4R)-4-(tert-Butyldimethylsilyloxy)-3-methoxy-2-phenylpyrrolidine (30):

To a solution of freshly prepared, crude amino alcohol 28 ( $350 \mathrm{mg}, 1.07 \mathrm{mmol}$ ) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}(20 \mathrm{~mL})$, were added triethylamine ( $166 \mu \mathrm{~L}, 121 \mathrm{mg}, 1.21 \mathrm{mmol}$ ), $\mathrm{CBr}_{4}$ $(414 \mathrm{mg}, 1.25 \mathrm{mmol})$, and $\mathrm{PPh}_{3}(328 \mathrm{mg}, 1.25 \mathrm{mmol})$ at $0{ }^{\circ} \mathrm{C}$. The resulting mixture was stirred overnight at room temperature and quenched with aqueous NaOH soln. ( 1 N, ca. 20 mL ). The layers were separated, the aqueous layer was extracted with a few portions of $\mathrm{Et}_{2} \mathrm{O}$, and the organics were combined, dried over $\mathrm{MgSO}_{4}$ and filtered, and the solvents were removed under reduced pressure. The crude mixture
was filtered through a short silica gel pad to give enriched $30(210 \mathrm{mg})$, with the triphenylphosphine oxide as the main inpurity. Additional column chromatography (silica gel, diethylether) furnished $30(110 \mathrm{mg}, 33 \%)$ as a colourless oil.

## Synthesis of pyrrolidine derivative 30 by demesylation of 29

To a solution of mesylated pyrrolidine $29(50 \mathrm{mg}, 0.13 \mathrm{mmol})$ in THF ( 8 mL ), a freshly prepared solution of LDA [by treatment of diisopropylamine (1.0 equiv.) with BuLi (1.0 equiv.) at $-78^{\circ} \mathrm{C}$ in THF and stirring for 30 min ] was added ( 0.70 mmol added in three portions, $\sim 0.23$ mmol each every 4 h ) at room temperature and stirred for 16 h . The reaction mixture was quenched with sat. $\mathrm{NH}_{4} \mathrm{Cl}$ solution followed by the addition of EtOAc. The two layers were separated, and the aqueous layer was extracted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. The combined organics were dried over $\mathrm{MgSO}_{4}$, filtered and concentrated. Compound 30 (5 mg, 13\%) was isolated by chromatography (silica gel, dichloromethane/methanol 30:1) as a light orange oil.

## Attempted cyclisation of 28 with pTsCl

To a solution of freshly prepared unpurified amino alcohol 28 ( $501 \mathrm{mg}, 1.54 \mathrm{mmol}$ ) in dry $\mathrm{CH}_{2} \mathrm{Cl}_{2}(35 \mathrm{~mL})$, triethylamine ( $1.24 \mathrm{~mL}, 893 \mathrm{mg}, 8.82 \mathrm{mmol}$ ) followed by pTsCl ( $656 \mathrm{mg}, 3.44 \mathrm{mmol}$ ) was slowly added at $0^{\circ} \mathrm{C}$, and stirred at room temperature overnight. Then the reaction was quenched with $\mathrm{H}_{2} \mathrm{O}$, the resulting solution was extracted with a few portions of $\mathrm{CH}_{2} \mathrm{Cl}_{2}$, the combined organics were dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and filtered, and the solvents were removed. The crude mixture was chromatographed on silica (hexane/ethyl acetate $3: 1$ gradient to $1: 1$ ) to furnish an inseparable $\sim 1: 1$ mixture of $N, O$-tosylated compounds ( $136 \mathrm{mg}, 14 \%$, first eluted fraction, see Results and Discussion part) and $\sim 4: 1$ mixture of tosylamides ( 301 mg , $41 \%$ ). The latter fraction was additionally purified (silica gel, hexane/ethyl acetate 3:1) to yield analytically pure 31 ( $177 \mathrm{mg}, 24 \%$ ) as a colourless solid.
