

Supporting Information

for

Decontamination from water pollutants and pathogens by electrospun nanofibers doped with heavy-atom-free borafluorene-BODIPY photosensitizers

Angelika Zaszczyńska, Paulina H. Marek-Urban, Karolina Wrochna, Agnieszka E. Kuklewska, Kacper Kręgielewski, Marta Grodzik, Dawid R. Natkowski, Jolanta Mierzejewska, Ewa Iwanek, Agata Blacha-Grzechnik, Paweł Sajkiewicz and Krzysztof Durka

Beilstein J. Nanotechnol. **2026**, *17*, 668–682. [doi:10.3762/bjnano.17.46](https://doi.org/10.3762/bjnano.17.46)

Additional experimental data

1 NMR

Figure S1: ^1H NMR (400 MHz) spectrum of **1** in CDCl_3 .

Figure S2: Analysis of the ^1H NMR spectrum (400 MHz, CDCl_3) for the photocatalytic oxidation of cimetidine with **1** (0.15 wt %) $@\text{PCL}$ (H_2O , 26 W white LED, 25 $^\circ\text{C}$). Integrals used for determination of reaction conversion are marked.

Figure S3: Analysis of the ¹H NMR spectrum (400 MHz, CDCl₃) for the photocatalytic oxidation of ranitidine with **1** (0.15 wt %)_@PCL (H₂O, 26 W white LED, 25 °C). Integrals used for determination of reaction conversion are marked.

Figure S4: Analysis of the ¹H NMR spectrum (400 MHz, CDCl₃) for the photocatalytic oxidation of propranolol with **1** (0.15 wt %)_@PCL (H₂O, 26 W white LED, 25 °C). Integrals used for determination of reaction conversion are marked.

2 Photocatalytic studies

Figure S5: Model of photoreactor used in the photocatalytic degradation of pharmaceuticals. Figure S5 was adapted from [1], (© 2021 P. H. Marek-Urban et al., Published by American Chemical Society, distributed under the terms of the Creative Commons Attribution 4.0 International License, <https://creativecommons.org/licenses/by/4.0>).

Figure S6: Photoreactor used in the microbiological experiments.

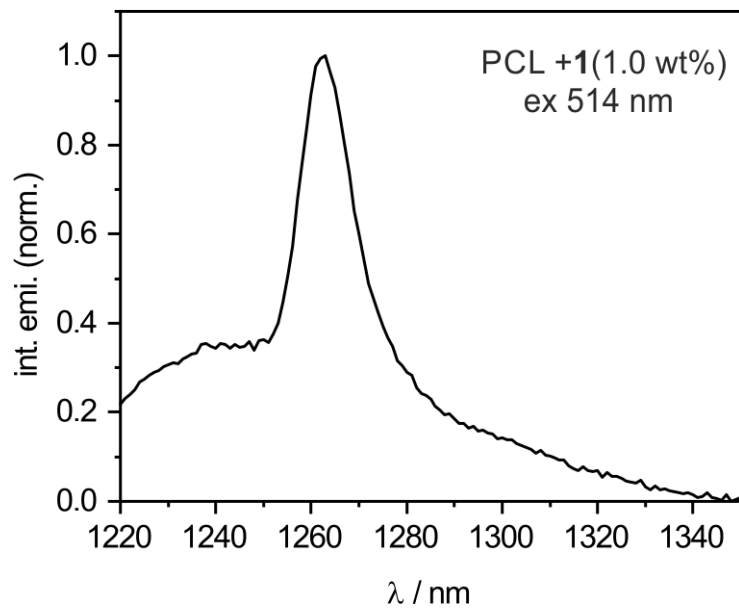

Figure S7: Emission spectrum of singlet oxygen for PCL@1(1.00 wt %) excited at $\lambda_{\text{ex}} = 520$ nm.

Figure S8: Fluorescence decay of PCL@1(0.15 wt %) at $\lambda_{\text{em}} = 521$ nm.

Figure S9: Fluorescence decay of PCL@1(0.50 wt %) at $\lambda_{\text{em}} = 525 \text{ nm}$.

Figure S10: Fluorescence decay of PCL@1(1.00 wt %) at $\lambda_{\text{em}} = 523 \text{ nm}$.
