Additional FESEM images, low-temperature N$_2$ adsorption isotherms and photodegradation results to support the discussion
**Figure S1**: FESEM images of TGN-branches achieved by immersing in the precursor solution for (a) 0 h, (b) 2 h, (c) 4 h, (d) 6 h and (e) 8 h.

**Figure S2**: The low-temperature N$_2$ adsorption isotherms of the pristine TiO$_2$ nanobelt (TiO$_2$ NB), TGN and TGN-branch 4 h.
**Figure S3:** Photodegradations of phenol in the presence of TGN and TGN-branches achieved by immersing in the precursor solution for various durations, under UV light illumination: (a) the degradation curves; (b) the fitting results assuming a pseudo-first order reaction.
