1. General Comments

All the reactions were performed in predried screw-capped tubes with a Teflon-lined septum under N₂ atmosphere. Diaryliodonium salts were prepared according to the literature [1-6]. *o*-Cyanoanilines except for those that are commercially available were prepared according to literature procedures [7-10]. All solvents were freshly distilled before use. Column chromatography was performed on silica gel (particle size 10–40 μm, Ocean Chemical Factory of Qingdao, China). ¹H NMR and ¹³C NMR spectra were recorded on a JEOL AL-300 MHz, AL-400 MHz or AL-600 MHz spectrometer at ambient temperature with CDCl₃ as the solvent. Chemical shifts (δ) were given in ppm, referenced to the residual proton resonance of the solvents (CDCl₃: 7.26 ppm; DMSO-*d*₆:2.49 ppm), ¹³C NMR to the carbon resonance of CDCl₃ (77.16 ppm) or DMSO-*d*₆ (39.7 ppm). Coupling constants (*J*) were given in Hertz (Hz). The terms m, dq, q, t, d, s refer to multiplet, doublet quartet, quartet, triplet, doublet, and singlet.

2. Typical procedure for the preparation of 2-(3-(2-bromophenyl)-4-imino-3,4-dihydroquinazolin-2-yl)aniline (3a).

In a 250 mL sealed tube the mixture of 2-aminobenzonitrile (1.77 g, 15 mmol), diaryliodonium salt (4.39, 7.5 mmol) and CH₂Cl₂ (45 mL) was heated to 110 °C and stirred for 6 h. This was followed by reaction with aqueous K₂CO₃ and standard work-up. Then the reaction mixture was diluted with 150 mL CH₂Cl₂, washed with saturated sodium bicarbonate, extracted with water and CH₂Cl₂, washed with brine, dried over anhydrous magnesium sulfate, and concentrated under reduced pressure to afford the crude product. Purification by flash column chromatography (hexane:ethyl acetate:trimethylamine 300:100:4) afforded 3.64 g (82%) of **3a** as a yellow solid. ¹H NMR (300 MHz, CDCl₃) δ 8.24 (s, 1H), 7.72–7.53 (m, 3H), 7.48–7.41 (m, 1H), 7.40–7.32 (m, 1H), 7.26 (dd, *J* = 8.0, 7.2 Hz, 1H), 7.17 (dd, *J* = 7.4, 6.5 Hz, 1H), 7.05–6.91 (m, 2H), 6.59 (d, *J* = 8.1 Hz, 1H), 6.44 (t, *J* = 7.5 Hz, 1H), 4.28 (s, 2H); ¹³C NMR (75 MHz, CDCl₃) δ 153.0, 144.8, 144.0, 133.8, 133.2, 131.0, 130.7, 130.4, 128.9, 128.4, 127.5, 127.3, 125.5(2×C), 124.1, 120.9, 120.6(2×C), 117.6, 116.5; mp 137–138 °C; HRMS–ESI (*m/z*): [M + H]⁺ calcd for C₂₀H₁₅BrN₄ 391.2639; found 391.2645; MS–ESI (*m/z*): [M + H]⁺ calcd for C₂₀H₁₅BrN₄ 391.3; found, 391.3.
