General information

All the reactions were carried out under air and monitored by TLC using Merck 60 F₂₅₄ pre-coated silica-gel plates (0.25 mm thickness) and the products were visualized by UV detection. Flash chromatography was carried out with silica-gel (200–300 mesh). ^1H and ^{13}C NMR spectra were recorded on a BrukerAvance (III) 400 Hz spectrometer. Data for ^1H NMR are reported as a chemical shift (δ ppm), multiplicity (s = singlet, d = doublet, q = quartet, m = multiplet), coupling constant J (Hz), integration, and assignment, data for ^{13}C are reported as a chemical shift. High resolutions mass spectral analyses (HRMS) were carried out using ESI-QTOF-MS (Microtof Q-II Bruker, condition: capillary voltage = –4500V, temperature = 250 °C, N₂ gas flow = 7 lit/min, nebulizer pressure = 2 bar, instrument is calibrated using ESI tune low calibration mixture before HRMS sample analysis). Melting points were recorded on an Electro thermal melting point apparatus and are uncorrected. FT-IR spectra were recorded on a KBr plate.

Experimental procedures

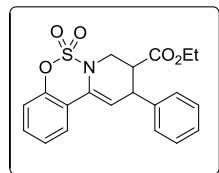

One-pot synthesis of compound **4a:** A mixture of sulfonyl ketimine (**1a**, 0.2 mmol), MBH carbonates (**2a**, 0.26 mmol), and DABCO (0.04 mmol) in anhydrous toluene (1.0 mL) was heated at 60 °C for 6h. Then the crude product was directly purified by column chromatography technique to give the product **4a** as a mixture of diastereomer in 88% yield.

General procedure for the synthesis of compounds **5aa–5am:** To a stirred solution of *N*-sulfonyl ketimine¹ (**1**, 0.2 mmol), MBH carbonates² (**2**, 0.26 mmol), and DABCO (0.04 mmol) in anhydrous toluene (1.0 mL) was heated at 60 °C. After completion of step I (monitored by TLC), DBU (1.2 equiv) was added to the above reaction mixture at same temperature. After 6–7 h, the reaction mixture was extracted with ethyl acetate (3 × 10 mL), washed with brined and dried over anhydrous Na₂SO₄. Afterwards, evaporation of organic solvent gave the crude product which was purified through column chromatography over silica-gel to afford the pure product.

All the obtained products (**5aa**–**5am**) were characterized by IR, ¹H NMR, ¹³C NMR and HRMS data.
