## 2 General Information

All reagents were obtained from commercial sources and used without further purification. Thin-layer chromatography (TLC) was performed using 60 mesh silica gel plates visualized with short-wavelength UV light ( 254 nm ). ${ }^{1} \mathrm{H}$ NMR spectra were obtained at 400 MHz and recorded relative to the tetramethylsilane signal ( 0 ppm ) or residual proton solvent. ${ }^{13} \mathrm{C}$ NMR spectra were obtained at 100 MHz , and chemical shifts were recorded relative to the solvent resonance ( $\mathrm{CDCl}_{3}, 77.16 \mathrm{ppm}$ ). Data for ${ }^{1} \mathrm{H}$ NMR are reported as follows: chemical shift ( $\delta, \mathrm{ppm}$ ) and multiplicity ( $\mathrm{s}=$ singlet, d = doublet, $\mathrm{t}=$ triplet, $\mathrm{q}=$ quartet, $\mathrm{m}=$ multiplet or unresolved, $\mathrm{br}=$ broad singlet, coupling constant (s) in Hz , integration).

## General procedure for the silver-catalyzed fluorophosphorylation of alkynes

In a vial, 1a ( $20.4 \mathrm{mg}, 0.2 \mathrm{mmol}$ ), Selectfluor ${ }^{\circledR}$ ( $141.7 \mathrm{mg}, 0.4 \mathrm{mmol}$ ), diethyl phosphonate ( $55.2 \mathrm{mg}, 0.4 \mathrm{mmol}$ ), and silver acetate ( $3.3 \mathrm{mg}, 0.02 \mathrm{mmol}$ ) were dissolved in DEC/ $\mathrm{H}_{2} \mathrm{O} 1 \mathrm{~mL}: 1 \mathrm{~mL}$. The resulting mixture was stirred under $\mathrm{N}_{2}$ atmosphere at $60{ }^{\circ} \mathrm{C}$ for 24 h . After completion, the reaction was quenched, and the suspension was extracted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. Volatile solvent was evaporated in vacuo, and the residual oil was purified by column chromatography on silica gel with a gradient eluent of petroleum ether and ethyl acetate to afford the fluorine product 2a. Note: A single $Z$-isomer of the product $\mathbf{2 a}$ was established by comparison with previous reports [1,2].

## Diethyl (Z)-(2-fluoro-2-phenylvinyl)phosphonate (2a)

The reaction was conducted on a 0.2 mmol scale following the general procedure. The desired product was purified by column chromatography (PE/EA 10:1) to give a colorless oil ( $40.9 \mathrm{mg}, 79 \%$ ).
