## Experimental

Commercially available reagent grade chemicals were used as received. All reactions were followed by TLC on Merck Kieselgel $60 \mathrm{~F}_{254}$, with detection by UV light and/or spraying $20 \%$ $\mathrm{KMnO}_{4}$ agueous solution. Column chromatography was performed on Silica Gel (230-400 mesh, Merck). IR spectra were recorded as thin films or neat chloroform solution with a Perkin-Elmer Spectrum RX-1 (4000-450 $\mathrm{cm}^{-1}$ ) spectrophotometer. The ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were recorded on a Bruker DRX -300 in ( $D$ ) chloroform, shift values in ppm relative to $\mathrm{SiMe}_{4}$ as internal reference, unless otherwise stated; signals are reported as s (singlet), d (doublet), t (triplet), m (multiplet); $J$ in Hz. Fast atom bombardment mass spectra (FABMS) were performed by the Mass Spectrometer Jeol SX-102(FAB). Elemental analyses were performed on a Perkin-Elmer 2400 II elemental analyzer. The optical rotations were measured in a 1.0 dm tube with a Rudolf Autopol III polarimeter in chloroform. Solvents were dried and stored over activated $4 \AA$ molecular sieve.

## 4-(3,4-Dimethoxy-5-oxo-1,5-dihydro-pyrrol-2-ylidene)-but-2-enoic acid ethyl ester

 (23): General Procedure: A solution of the above compound $11(0.7 \mathrm{~g}, 2.58 \mathrm{mmol})$ in anh. $\mathrm{CH}_{2} \mathrm{Cl}_{2}(5 \mathrm{~mL})$ and $p$-toluene sulphonic acid ( $p \mathrm{TSA}, 0.49 \mathrm{~g}, 2.58 \mathrm{mmol}$ ) was stirred magnetically for 30 min . at $30^{\circ} \mathrm{C}$ till the disappearance of the starting material (TLC). The reaction mixture was neutralized ( pH 7.0 ) with solid $\mathrm{NaHCO}_{3}$, filtered and filtrate was concentrated to give a crude mass. The latter was dissolved in ethyl acetate (100 mL ), washed with water ( $2 \times 25 \mathrm{~mL}$ ), the organic layer dried $\left(\mathrm{Na}_{2} \mathrm{SO}_{4}\right)$ and evaporated under reduced pressure to give a gummy mass. The latter was chromatographed over silica gel (60-120 mess) using a gradient of $(1: 19 \rightarrow 1: 4)$ as eluent to give compound 23 as colourless solid.
