Experimental details and spectroscopic data

S1: Procedure for etherification of 3-furanmethanol.....	S2
S2: The ¹ H NMR spectrum (CDCl ₃ , 500 MHz) of natural sample (–),(5 <i>R</i> ,6 <i>Z</i>)-dendrolasin-5-acetate (1)	S3
S3: gCOSY spectrum (CDCl ₃ , 500 MHz) of 1	S3
S4: gHSQC spectrum (CDCl ₃ , 500 MHz) of 1	S4
S5: gHMBC spectrum (CDCl ₃ , 500 MHz) of 1	S4
S6: The ¹ H NMR spectrum (CDCl ₃ , 500 MHz) of (±)-(E)-1-(furan-3-yl)-4,8-dimethylnona-3,7-dien-2-ol (7a).....	S5
S7: The ¹ H NMR spectrum (CDCl ₃ , 500 MHz) of (±)-(Z)-1-(furan-3-yl)-4,8-dimethylnona-3,7-dien-2-ol (7b)	S5
S8: The ¹ H NMR spectrum (CDCl ₃ , 500 MHz) of (R,R)-(6 <i>Z</i>)-dendrolasin MPA ester (11a)....	S6
S9: The ¹ H NMR spectrum (CDCl ₃ , 500 MHz) of (R,S)-(6 <i>Z</i>)-dendrolasin MPA ester (11b).....	S6

S1: Procedure for etherification of 3-furanmethanol [1]

To a solution of geranyl bromide (**5**, 499.1 mg, 2.3 mmol) containing neryl bromide (<5%) and 3-furylmethanol [2] (**4**) (125 mg, 1.3 mmol) in DMF (3 mL) was added NaH (ca. 60 % purity, 91.9 mg, ca. 36.7 mmol) at 0 °C and stirring was continued for 8 h at rt. The reaction was carefully quenched with sat. aq NH₄Cl solution in an ice bath. The reaction was extracted with Et₂O and CH₂Cl₂ (v/v, 2:1), and the combined organic layers were washed with brine. The organic layer was dried over Na₂SO₄ and evaporated to give a residue, which was chromatographed on silica gel (80 g, hexanes/Et₂O = 95:5) to afford an *E/Z* mixture (**3:1**) of the 3-furylmethyl ether (**6**, 386.5 mg) as a yellowish oil.

Geranyl 3-furylmethyl ether (**6**): ¹H-NMR (CDCl₃, 500 MHz): δ_H 7.39 (1H, s, H-1), 7.37 (1H, s, H-15), 6.42 (1H, s, H-2), 5.37 (1H, t, *J* = 6.7, H-6), 5.09 (1H, t, *J* = 6.7, H-10), 4.37 (2H, s, H-4), 4.00 (2H, d, *J* = 6.8 Hz, H-5), 2.10 (2H, m, H-8), 2.04 (2H, m, H-9), 1.67 (3H, s, CH₃-14), 1.65 (3H, s, CH₃-12), 1.59 (3H, s, CH₃-13). (+)-LRESIMS *m/z* 234.33 [M + Na]⁺.
