4,7-Di-tert-butyl-2-thioxobenzo[d][1,3]dithiole-5,6-dione (6a) Solution of sodium tritiocarbonate (1.39 g, 9 mmol ) in 15 mL DMF was added to the solution 3,6-di-tert-butyl-4,5-dichloro-o-quinone $\mathbf{2}$ ( $2.60 \mathrm{~g}, 9 \mathrm{mmol}$ ) in 15 mL of DMF dropwise at $0^{\circ} \mathrm{C}$. Then the mixture was allowed to warm to room temperature and the color of the solution immediately turned from red to red-brown. After that the mixture was stirred for another 15 minutes, and then the solution is poured into cool water. The product was extracted from an aqueous solution with diethyl ether ( $5 \times 45 \mathrm{~mL}$ ). The ether solution is washed with water ( $5 \times 50 \mathrm{~mL}$ ) and then solvent was removed on a rotary evaporator.
